

**D Y Patil College of Engineering, Akurdi , Pune,
411044**

Department of Information Technology

**AtLease – A Decentralized Warehouse Leasing Platform
LOG BOOK**

Submitted to the

Savitribai Phule Pune University

In partial fulfillment for the award of the Degree of

Bachelor of Engineering

in

Information Technology

By

Exam Seat No	Name
BEIT2526A049	Abhishek Biradar
BEIT2526A029	Purvesh Jambhulkar
BEIT2526A060	Viraj Gudhetwar
BEIT2526A041	Piyush Mogare

Under the guidance of

Mrs. Abhilasha Kore

D.Y.Patil College of Engineering, Akurdi, Pune
Department of Information Technology
Academic Year: 2024-25

Vision of Institute

“Empowerment through knowledge”

Mission of Institute

To educate students to transform them as professionally competent and quality conscious engineers by providing conducive environment for teaching, learning and overall personality development, culminating the institute into an international seat of excellence.

Vision of Department

Developing globally competent IT professional for sustainable growth of humanity.

Mission of Department

M1 : To impart high-quality education in Information Technology, equipping students with the technical knowledge, problem-solving abilities, and professional skills required to excel as competent IT engineers and technologists

M2 : To create a dynamic and inclusive learning environment that nurtures technical expertise, critical thinking, teamwork, and holistic personality development, empowering students to excel in their professional and personal endeavours.

M3 : To foster a culture of academic and research excellence in IT, enabling the department to achieve national and international recognition as a centre of innovation, entrepreneurship, and technological advancement

D.Y.Patil College of Engineering, Akurdi ,Pune
Department of Information Technology
Academic Year: 2024-25

Course Objectives

- To encourage and provide opportunities for students to get professional/personal experience through internships.
- To learn and apply the technical knowledge gained from academics /classroom learning in real life/industrial situations.
- To get familiar with various tools and technologies used in industries and their applications.
- To enable students to develop professional skills and expand their professional network with the development of employer-valued skills like teamwork, communication.
- To apply the experience gained from industrial internship to the academic course completion project.
- To nurture professional and societal ethics in students
- Understand the social, economic and administrative considerations that influence the working environment of industrial organizations

Course Outcomes

On completion of the course, learners should be able to -

- CO1: Develop professional competence through industry internship.
- CO2: Apply academic knowledge in a personal and professional environment
- CO3: Build the professional network and expose students to future employees.
- CO4: Apply professional and societal ethics in their day-to-day life.
- CO5: Become a responsible professional having social, economic and administrative considerations.
- CO6: Make own career goals and personal aspirations.

MEETING	DATE (DD/MM/YY)	ACTIVITY DESCRIPTION	GRADE	SIGN OF GUIDE
01	07/08/25	Problem Identification, Literature Survey & Project Planning		
02	12/09/25	System Design & Architecture Finalization		
03	15/10/25	Smart Contract Development & Blockchain Integration.		
04	21/11/25	Frontend Development (React UI Integration)		
05	07/12/25	Backend Development – Phase I (API Design, IPFS Integration)		
06	14/01/2025	Backend Development – Phase II & System Integration (In Progress)		

Month No.: 1 (August 2025)

Activities Performed:

- I began by understanding the overall concept and objective of the **AtLease** project, which focuses on developing a decentralized warehouse leasing certificate system using blockchain technology.
- I studied the existing challenges in traditional warehouse leasing systems, such as centralized record keeping, lack of transparency, risk of document tampering, and dependency on intermediaries for verification.
- I carried out a literature survey to analyze how blockchain technology, smart contracts, and non-fungible tokens (NFTs) are applied in real-world certification and property management systems.
- I studied and finalized the technology stack to be used in the project, which included:

Observations:

- I observed that blockchain technology can significantly improve transparency and trust in leasing systems by providing immutable and verifiable records.
- I realized that integrating multiple technologies such as frontend, backend, blockchain, and decentralized storage requires proper planning and system design.

Learnings:

- I gained a clear understanding of the problem statement and objectives of the AtLease project.
- I learned the basic working principles of blockchain, NFTs, and decentralized storage systems.

Remark & Signature of Guide:

Month No.: 2 (September 2025)

Activities Performed:

- Designed the high-level system architecture of the AtLease project, identifying frontend, backend, blockchain, and IPFS components.
- Defined the workflow for warehouse lease certificate creation and verification using blockchain.
- Planned the interaction between React frontend and Node.js backend using REST APIs.
- Finalized the use of IPFS for off-chain storage of lease certificate metadata.
- Prepared architectural and workflow documentation for future implementation.

Observations:

- To design a scalable and modular architecture for the AtLease system.
- To define a clear data flow for decentralized lease certificate generation.
- To select appropriate technologies for blockchain and decentralized storage integration.

Learnings:

- Gained understanding of designing layered architectures for blockchain-based applications.
- Learned how off-chain storage helps reduce blockchain costs while maintaining data integrity.
- Understood the importance of clear workflow planning before implementation.

Remark & Signature of Guide:

Month No.: 3 (October 2025)

Activities Performed:

- I started working on the blockchain layer of the AtLease project by understanding the basics of smart contracts and the ERC-721 NFT standard.
- I designed the structure of the lease certificate smart contract, defining how each warehouse lease would be represented as a unique digital certificate.
- I implemented the initial version of the smart contract using Solidity, focusing on certificate minting and ownership management.
- I configured the development environment using tools such as MetaMask, Remix, and local test networks for smart contract testing.

Observations:

- To design a secure smart contract for warehouse lease certificate issuance.
- To ensure lease certificates remain non-transferable and bound to tenant wallets.
- To gain hands-on experience with blockchain development and testing.

Learnings:

- I gained practical understanding of writing and deploying smart contracts using Solidity.
- I learned how ERC-721 NFTs can be customized for non-transferable certification use cases.
- I understood the importance of testing smart contracts before deployment to a blockchain network.

Remark & Signature of Guide:

Month No.: 4 (November 2025)

Activities Performed:

- I worked on developing the frontend interface of the AtLease project using React to enable user interaction with the system.
- I implemented screens for warehouse listing, lease request initiation, and certificate viewing.
- I integrated wallet connectivity to allow users to connect their blockchain wallets and view issued lease certificates.
- I began backend development using Node.js and Express.js by creating basic REST API endpoints.

Observations:

- To develop a functional user interface for interacting with the AtLease system.
- To establish backend APIs for communication between frontend and blockchain services.
- To ensure smooth interaction between user actions and system responses.

Learnings:

- I improved my understanding of building dynamic user interfaces using React.
- I learned how frontend and backend components communicate using REST APIs.
- I gained experience in handling wallet connectivity and blockchain interactions from the frontend.

Remark & Signature of Guide:

Month No.: 5 (December 2025)

Activities Performed:

- I continued backend development for the AtLease project by implementing core server-side logic using Node.js and Express.js.
- I developed REST API endpoints for handling lease certificate data and user requests.
- I integrated IPFS into the backend to store lease certificate metadata in a decentralized manner.
- I tested backend APIs using tools such as Postman and validated request and response handling.

Observations:

- To implement core backend functionality required for lease certificate issuance.
- To integrate decentralized storage and blockchain interaction with the backend.
- To ensure reliable communication between frontend, backend, and blockchain layers.

Learnings:

- I gained practical experience in developing REST APIs using Node.js and Express.js.
- I learned how to integrate IPFS and blockchain services into a backend application.
- I understood the importance of proper API testing and error handling.

Remark & Signature of Guide:

Month No.: 6 (January 2026)

Activities Performed:

- I continued backend development by enhancing existing API endpoints and improving overall application logic.
- I worked on integrating frontend components with backend services to ensure smooth data flow across the system.
- I implemented validation and error-handling mechanisms to improve reliability and security.
- I performed partial system testing to verify backend functionality and blockchain interactions.
- I reviewed the overall system and identified pending tasks related to deployment and optimization.

Observations:

- To complete remaining backend functionalities and improve system stability.
- To integrate all project components into a single working system.
- To prepare the application for final testing and deployment.

Learnings:

- I gained a better understanding of system integration and debugging in full-stack applications.
- I learned how to handle errors and edge cases in backend development.
- I understood the importance of testing and refinement before final deployment.

Remark & Signature of Guide:

Month No.: 7 (February 2026)

Activities Performed:

- I refined existing backend modules to improve performance, code structure, and maintainability.
- I optimized API endpoints and database queries to enhance system efficiency.
- I worked on improving integration between frontend and backend components for smoother communication.
- I implemented additional validation checks and improved error-handling mechanisms.
- I conducted system testing to identify bugs and inconsistencies in the application.

Observations:

- Refining existing modules significantly improved application performance and responsiveness.
- Continuous testing and debugging were essential for identifying hidden issues in the system.

Learnings:

- I learned the importance of refining and optimizing existing code for better system performance.
- I gained deeper understanding of debugging techniques and identifying performance bottlenecks.

Remark & Signature of Guide:
